

Tutorial Session Objectives (18th Apr)

Stock Prices Insights Generation

Objective:

Explore how LLMs can be integrated with structured financial data, specifically focusing on the Nifty 50 companies. See how LLMs can automatically interpret user request, generate SQL queries, and provide insights in a dynamic and automated way. The core goal is for learners to understand how LLMs can be effectively leveraged to interact with databases, generate insights, and simulate complex query-response flows.

Files shared:

1. *M5_AST_01_Leveraging_LLMs_for_Querying_Insights.ipynb* **[Graded Notebook]**
This includes the project abstract, architecture, steps to create a SQLite database, and perform SQL query generation using an LLM.
2. *Additional_NB_01_Data_Loading_for_Querying_Insights.ipynb*
This includes the steps to load the stock prices data from pickle files, combine it, and store it in a SQLite database.
3. *Steps for Stock Prices Insights Generation Application.pdf*
This includes the complete steps and code to launch a interactive UI for the Stock Prices Insights Generation application.
